

# Pattullo Bridge Replacement Project

## Tree Replacement

Trees removed as part of Project work will be replaced at a minimum ratio of 2:1.

As with many large construction projects, trees in the Pattullo Bridge Replacement Project area need to be removed to accommodate the new bridge alignment and project construction in New Westminster and Surrey. All tree removal will be completed in accordance with applicable legislation and best management practices.

The project team will work closely with municipalities and First Nations on the replacement of trees and the enhancement of sites within the project area over the duration of the project.

### Tree Protection Plan

Some trees in the Project area are protected trees. A Tree Protection Plan is in place to preserve and protect these trees. Protected trees have been included in a tree inventory to establish the species, size, and current condition of trees that may need to be managed during the Project.
