

Pattullo Bridge Replacement Project

McBride Boulevard – East Columbia Street intersection improvements

As part of the Pattullo Bridge Replacement Project, the McBride Boulevard and East Columbia Street intersection requires modification to improve safety for walkers, cyclists and drivers, and to accommodate the new direct East Columbia off-ramp from the new bridge. The Project will improve sight lines for westbound drivers turning right onto McBride and create safer crossing for walkers and cyclists.

Rehabilitated heritage wall and revitalized plaza

Intersection improvements required the relocation of approximately 85 metres of the heritage wall at the corner of McBride and East Columbia. The wall has been rebuilt further north, and the wrought iron was salvaged and will be reinstalled on the new wall.

The Project will also build an accessible revitalized plaza that includes bike parking, benches, and direct access to the multi-use path connecting to the bridge. The plaza will also enhance the public's understanding of the historical significance of the Woodlands institution through interpretation panels.
